STERILISATION AND DISINFECTION IN DENTISTRY
CERTIFICATE COURSE - REGISTER

Dr. Giju George Baby
Principal
Annoor Dental College Hospital
Muvattupuzha 686 73

COURSE CONTENT :

The concept of sterility employed in health-care facilities has changed significantly in the recent times. One of the primary responsibilities of Dental Health Care Professionals is to create a safe and comfortable environment for their patients. This is achieved by implementing proper sterilisation and disinfection methods and also by following standard / universal precautions. Sterilisation and disinfection methods are essential for ensuring that medical and surgical instruments do not transmit infectious pathogens to patients. As sterilisation of all patient-care items is not necessary, health care facilities must identify, primarily on the basis of items' intended use, whether cleaning, disinfection or sterilisation is indicated.

It is necessary and important that the professional responsible for and involved in the process must have a solid scientific understanding and education in the methods and procedures. Keeping this in mind we provide an educational program in the methods of sterilisation and disinfection instruments used, evaluation of dental sterilisation procedures and recent advances in the field to uphold the quality of standardised sterilisation in dentistry.

The course is conducted as 3 modules, each module having 2 sessions covering the relevant topic.

The certificate of participation will be awarded for those who have successfully completed the course.

BASIC LIFE SUPPORT – HANDS ON TRAINING COURSE

Course content

COURSE OVERVIEW

Basic Life Support (BLS) refers to maintaining an airway and supporting breathing and the circulation. It comprises the following elements: initial assessment of the person, airway maintenance, expired air ventilation (rescue breathing; mouth-to-mouth ventilation) and chest compression. When all combined, the term cardiopulmonary resuscitation (CPR) is used. It also includes the management of choking. The training offers First Aid courses, practical and scenario-based to give a more modern hands-on and memorable learning experience. This helps to gain the skills and confidence to deal with emergency situations. The courses are designed to meet all levels of first aid training for all undergraduate & postgraduate students, interns and faculties of the college.

Course Objectives

1. Understand relevant anatomy and physiology of cardiopulmonary system
2. Describe the links in the chain of survival
3. Describe, understand and perform BLS

Modules

Consists of 2 modules/year – 30 hrs

1 module - 5hrs per day *3 days – total of 15 hrs

Course Information

Modules covers the lectures and hands on training life-saving elements including;

- Recovery position
- C.P.R
- Defibrillator
- Choking

Module 1

Course Content

- Basic life support skills
- Rescuer CPR and AED for adult, child and infant
- Bag-mask techniques for adult, child and infant
- CPR with an advanced airway management

PROSTHODONTIC REHABILITATION

Prosthetic Rehabilitation is the act of restoring something to its original state. The main goal of dentistry is to maintain or restore the oral health of the patients throughout their lives. If the teeth are lost regardless of all efforts to save them, re-establishment has to be done in order to function efficiently and comfortably in harmony with the stomatognathic system and the temporomandibular joints. There has been a remarkable progress for rehabilitation over the past few decades. Since there is a rapid increase in the research work recently it gives the clinicians many possibilities to attain optimum knowledge to select the use of materials and techniques which are employed for rehabilitation providing both health and comfort to the patients.

To create awareness about "Prosthetic Rehabilitation", an oration was conducted by Annoor Dental College, on 9th and 10th of May 2019 (Thursday & Friday) as one module per year (2018-2019). The speaker for the day was Dr. Cherian K.P., Head of the Department, Department of Prosthodontics. Around 56 students and faculties attended the event. The speaker focussed on prosthetic rehabilitation that would restore the function, aesthetics and health of the oral tissues.

To conclude, the speaker appealed the gathering to espouse prosthetic rehabilitation for edentulous patients which would make their life much easier and comfortable.
